

Contents

Preface	v
1 Power of a Point	1
2 Carnot and Radical Axes	15
3 Ceva, Trig Ceva, Quadrilateral Ceva	37
4 Menelaus' Theorem	57
5 Desargues and Pascal	71
6 Jacobi's Theorem	85
7 Isogonal Conjugates and Pedal Triangles	95
8 Simson and Steiner	111
9 Symmedians	129
10 Harmonic Divisions	149
11 Appendix A: Some Generalizations of Blanchet's Theorem	165
12 Poles and Polars	173
13 Appendix B: An Incircle Related Perpendicularity	189
14 Homothety	199
15 Inversion	211
16 The Monge-D'Alembert Circle Theorem	223

17	Mixtilinear and Curvilinear Incircles	233
18	Ptolemy and Casey	247
19	Complete Quadrilaterals	261
20	Apollonian Circles and Isodynamic Points	275
21	The Erdős-Mordell Inequality	287
22	Sondat's Theorem and the Neuberg Cubic	299
23	Introduction to Complex Numbers	321
24	Complex Numbers in Olympiad Geometry	339
25	3D Geometry	359
	Bibliography	367
